

## **PRESS RELEASE**

### **Quadrel Compact Camless Rotary Labeling System**

Some bottles cannot be labeled efficiently with a traditional inline labeling system. Rotating the bottle for proper orientation or label impression may be the only solution. This inexpensive Rotary Labeling System is ideally suited for Single Side, Multi-panel, or complete Wraparound label applications with production rates up to 80 ppm. The innovative Maltese Cross bottle platform motion design, integrated Q65 labeling head and overhead system controls make the system space efficient, easy to clean and inexpensive.
