

Q33 Printer Applicator

24/7 RELIABILITY

The Q33 Printer Applicator is the most rugged Printer Applicator in its class. Design features include a machined 5/8" thick side plate, integrated electronics with a choice of microprocessor *or* non-proprietary PLC control, and complete RFID compatibility. It is the first printer applicator with the "straight" web path to ensure the adhesive bond between the IC chip and flexible antenna is not damaged by the applicator. The Q33 is available with a number of applicator modules including air-tamp, air-blow, tamp-blow, wipe-on and various pneumatic swing arms for side, top, leading edge, adjacent side or corner wrap labeling applications.
