

## Track and Trace Labeler

Quadrel offers an integrated Track and Trace System that prints a serialized EPC code on each bottle while labels are printed with another EPC barcode. These codes are captured and automatically uploaded into a Video Jet (ePedigree) database for full tracking of each unit. The Versaline features Allen Bradley controls, Emerson servo motors, Cognex vision and Videojet printing and ePedigree technologies. It is ideal for front/back, wraparound and custom applications.
