## High Speed Forms Labeling System

### INDUSTRY

Business Forms Manufacturing  
Direct Mail

### APPLICATION

Top

### PRODUCTS

Fan-Folded Pin-Fed Business Forms

### PRODUCTION RATE

190' Per Minute

The High Speed Forms labeling system applies labels to multi-part business forms at speeds up to 190' per minute with pinpoint accuracy. This system utilizes a Q60B applicator featuring two separate intercommunicating microprocessor controls. Encoder-based line speed compensation automatically synchronizes the label to the form and eliminates the need for eyemarks. Stacked, fan-folded forms are transported through the system by tractor drive. The forms are then restacked by a gravity folder.

The system shown accommodates up to 4 labels per form, with a maximum label web width of 10" (maximum label width is 9-7/8") and 20" diameter roll capacity.

An optional Dual Forms labeling system is available.
