

CAPABILITIES PROFILE

Food Grade Bottom Labeling System

This integrated labeler features a compact Quadrel Q31 Printer Applicator, two split belt food-grade conveyors and integrated stainless steel frame.

System operation is both simple and efficient. Products are transferred to an infeed conveyor where they are aligned by a set of guide rails. Products then enter the labeling area where the printer applicator prints and applies a label to the bottom of the product. The split belt design provides complete product access for true next out print & apply labeling while exposing the leading panel for 3-panel tamper-evident labeling.

This bottom labeling system is ideal for a wide variety of products. Quadrel also offers a dual hugger-belt system for applying labels to the bottoms of more unstable products.
