

R220[®]

Remote Powered Label Unwind

The R220 label unwind is ideally suited for supplying labels to all Quadrel Label Applicators. Labels are unwound into the label bin and pulled out of the bin by the labeling applicator. When the bin is empty, the unwind system fills the bin automatically. As the label supply depletes, a warning indicator illuminates to inform the operator to prepare a label splice while the labeling applicator remains running.

Features include a 20" dual unwind capacity, low label detection with amber lamp, anti-static web path, stainless steel construction and Allen-Bradley[®] programmable controls.
