

## Front/Back & Top Labeling System for Tapered Containers

The popular ModuLine labeling system was designed to apply top and wraparound labels to plastic, tapered containers at speeds up to 40 ppm.

### Q41 Air Blow Applicator

### Q41 Air Blow Grid

This unique inline system perfectly aligns the top label with the side labels.

The air-blow applicator is mounted to an adjustable support that allows the head to swivel.

Once the top label is applied, the top hold down conveyor keeps the product aligned while the side labels are applied.

The wipe-on applicators are designed with tilt adjustments and are positioned to match the taper of the container.

The wrap station rotates the product to finish label adhesion.
